PRODUCT OVERVIEW

The Ethereal HDM-JR4 EDID Booster is the latest in our esteemed line of HDMI® repair products. It is an HDMI® Signal Conditioner that strips the capacitance loading off the DDC (EDID) Bus, that otherwise reduces the Data Rise Time and Thus improves the consistency and reliability of the essential low-speed communication between the source and display. Solving many of the common issues professional integrators face in the field, such as Audio dropouts, long sync times, mode / frequency out of range, and High-Definition Content protection (HDCP) failure. This proprietary inline device is passive and requires no external power. It is a small, low-profile design which allows for simple installation at the display side (Display Panel or Projector) of the HDMI connection between devices. Designed “Future Ready.” It will pass up to 48 Gbps (4 x 12 Gbps per channel), of High-Speed Bandwidth and offers bi-directional EDID repair benefits for both input and output stages. The HDM-JR4 is the surest way to improve communication between the source and the display..

- Small form factor
- High value solution
- Plug and go performance
